

LANDSCAPING

OUR EXPERIENCE

LANDSCAPE DESIGN AND IMPLEMENTATION

Binburra Avenue Avalon (*Private Client*)

Preparation of a detailed landscape design in a sensitive coastal site that required enhancement of biodiversity values, provision of habitat values for local wildlife and coastal aesthetics.

Harris Street Pyrmont (*Private Client*) prepare and install a landscape design in an urban setting that provided habitat values for birdlife and screened adjacent development.

Remuera St Willoughby (*Private Client*) prepare and install a landscape design to address drainage and access issues and provide habitat values for local wildlife.

LANDSCAPE MANAGEMENT

Cheltenham Girls High Conservation Area (**Department of Public Works**) WEW was commissioned to raise and install over 20,000 locally indigenous tubestock plants for revegetation of the school's Conservation area which contains Sydney turpentine-ironbark forest - endangered ecological community. Planting was undertaken in 2012 and monitoring and maintenance of plantings continues over a five-year period to 2017.

Moorebank Biodiversity Offset Revegetation Works (OPEC Systems and Department of Defence) WEW were commissioned to supply and install over 40,000 native plants at a

biodiversity offset located in Moorebank NSW on behalf of OPEC Systems and the Department of Defence. This project required removal of unexploded ordinance by OPEC Systems prior to the planting and maintenance works.

Middle Head, Mosman Ecological Restoration (*Sydney Harbour Federation Trust (SHFT)*) Our ecological management activities are undertaken in partnership with landscape management of the SHFT lands. Our management works are sensitive to the required aesthetic appeal of the high profile SHFT sites while ensuring protection of ecological values. Sites include: North Head Sanctuary, Middle Head, Georges Heights, Chowder Bay, Cockatoo Island and Woolwich Docks.

Whites Creek and Mort Bay Bushland Management (*Leichardt Council*) our teams undertake works in urban bushland areas that support recreational users and native wildlife. Works include maintenance weeding, weed sweeps and target weeding and rubbish management. These works require high levels of sensitivity to landscaping works and a focus on the maintenance of aesthetic appeal in high profile bushland sites.
